

Kollective IQ

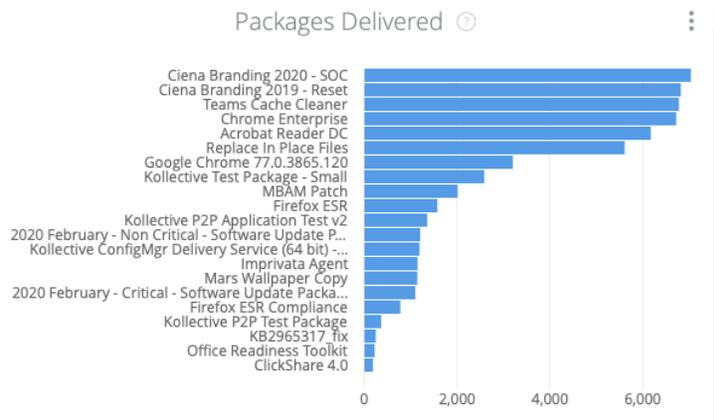

Analytics for Configuration Manager Content Delivery

Faster, More Efficient SCCM

Kollective IQ is an analytics platform for content delivery, allowing you to easily create dashboards and reports; as well as drill-down capabilities, providing the metrics your organization needs to better understand network performance and verify the success of deliveries.

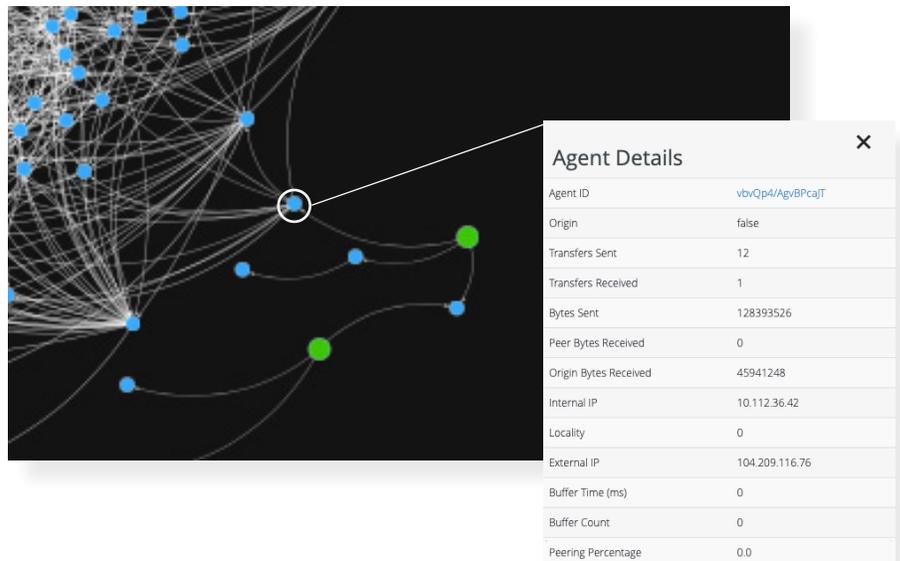

With Kollective IQ you'll gain valuable insights on file and package delivery across your network.

Network Explorer

3D Representation of your network that shows how content was delivered

- **View peering relationships:** peering leads, receivers of content and how Kollective's intelligent peering automatically recovers when an interruption in file delivery occurs.
- **Filter your network** by peering %, locality, specific IP's or a full range of IP (i.e. particular office).
- **Drill down to individual nodes** to gain insights on how your network is performing.

Make SCCM even more powerful

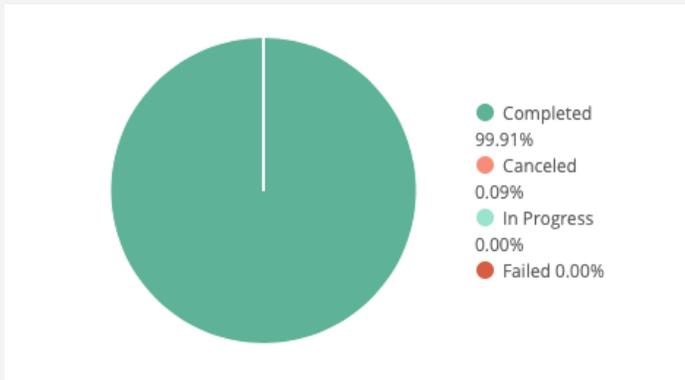

Work Smarter, not harder

With Kollektive for ConfigMgr, you can achieve greater than 95% peering efficiency, and significantly reduce your WAN bandwidth utilization.

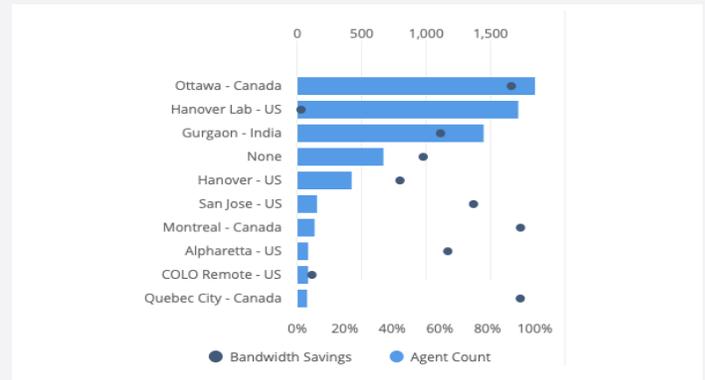

This means faster and more reliable delivery of Configuration Manager content to the edge of your network. Kollektive IQ provides the analytics you need to ensure your network environment is secure and fully optimized.

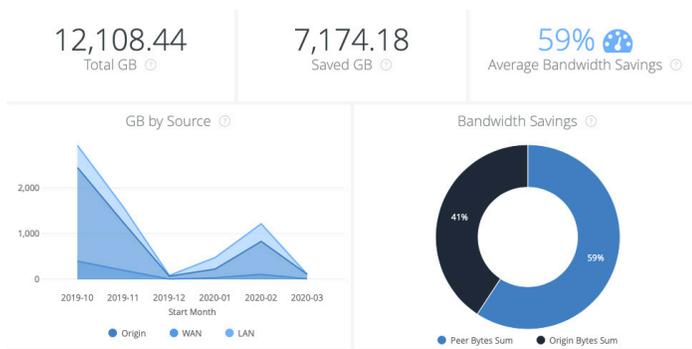

View your content deliveries around the globe with Geo Explorer

See the status of every file or package, and drill down to see details for failures

View top Localities, Peering % & Bandwidth Savings

Visualize Your Network Savings

See the benefits and bandwidth savings achieved through intelligent peering of content delivery across your network. The Kollektive for Configuration Manager dashboard allows you to see the total GB delivered and saved through peering. You can segment based on sources of peering across your WAN and LAN; as well as drill down to agent specific details
