# Kollective ECDN

Benefits

- Accelerate Employee Engagement – Kollective installs in minutes, adapts to networks of all shapes and sizes, and delivers flawless video content regardless of the viewer's location

- Eliminate Security Concerns – From zero-trust network requirements to reaching users in China and remote locations, Kollective conquers the most complex network challenges

- Reduce Costs and Complexity – Skip the never-ending hardware costs and deploy a modular, simple, and effective solution designed to grow with your organization

- Supercharge Collaboration – Utilize the only smartECDN platform with machine learning that automates bandwidth savings and constantly improves viewer experiences

- Improve Satisfaction and Loyalty – Increase customer retention and revenue through dedicated and in-region support teams across the globe with industry-leading response times

Changing the way your network delivers collaboration

The modern workplace requires always-on video communication. Delivering amazing video experiences to every user is now mission critical. However, your employees are increasingly dispersed around the world, juggle multiple tools, and peak network demands are volatile and unpredictable. This is the new hybrid work reality, but your network is severely unprepared.

Kollective breaks down barriers between teams, increases engagement, and drives innovative collaboration through consistent and frictionless video distribution. This means less stress, more confidence, and a fantastic ROI for both your video and network solutions.

Kollective's cloud-based infrastructure solution makes scaling video easy for you, giving your users a terrific experience, deep observability and insights into how your users are consuming video, all while saving your network costly bandwidth and accelerating digital collaboration.
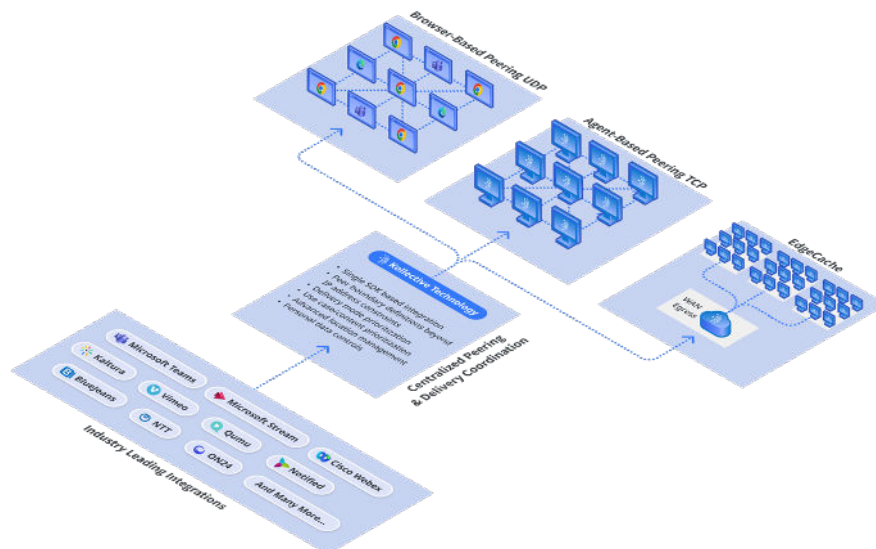

One Platform, Multiple Technologies, on Any Network

Kollective is the only ECDN (Enterprise Content Delivery Network) platform that offers a complete and comprehensive delivery solution, including browser-based peering, agent-based peering, and EdgeCache local caching.

All three methods utilize a centralized peering and delivery SDK to route the end user to the most efficient source for the content requested. Kollective enables customer choice by integrating with the leading video solutions and eliminates any concerns of bandwidth availability, network congestion, or user experience.

With Kollective ECDN, you can:

- Solve collaboration challenges regardless of network architecture or user location

- Leverage ALWAYS ON content delivery, scalability, and visibility that continuously improves

- Achieve peak performance through automated analytics and optimization insights

"Efficient video delivery to staff located on the fringes of the network was key to the requirement of the solution. Kollective was able to meet this requirement bringing communications to areas where it had not been possible before."

Manager Global Digital Media & AV,
HSBC BANK

Activate Kollective today

Kollective activates in minutes to rapidly scale video delivery to all offices and employees, regardless of network complexity and user location.
